

THE BETTER WAY

Optimize your logistics with our Consulting Services and Cutting-Edge Technologies

SOFTWARE · CONSULTING · OUTSOURCING

Your Logistics have potential

More than 50 years of experience in logistics consulting and software development have shown us: logistics processes hold high optimization potential. Take advantage of our competence and experience for higher quality and lower costs in your logistics.

We will help you to transform your logistics into a competitive advantage.

Whether in location decisions, carrier selection or operative planning, there are many determining factors that can be adjusted to increase efficiency and quality as well as decrease costs. Our logistics specialists help you to identify optimization potential and provide you with the software and instruments you need to use this potential both strategically and operatively.

Software

Whether for routing & scheduling, transport management, tendering or strategic simulation of logistics networks – we provide proven software, customized to fit your company's needs.

Consulting

We offer support for all phases of your projects – from benchmark analysis to realization of new concepts for warehousing and transport.

Outsourcing

External freight control and invoicing saves time and money. Each year, our experts check invoices for clients amounting to more than one billion Euros in value.

CONSULTING

Open for new concepts?

Staedtler-Logistics – our name stands for cooperative and implementation-oriented consulting by experienced transport and warehousing experts.

Our consultants use real data to develop and review concepts, closely examining strategic transport networks and complex operative processes.

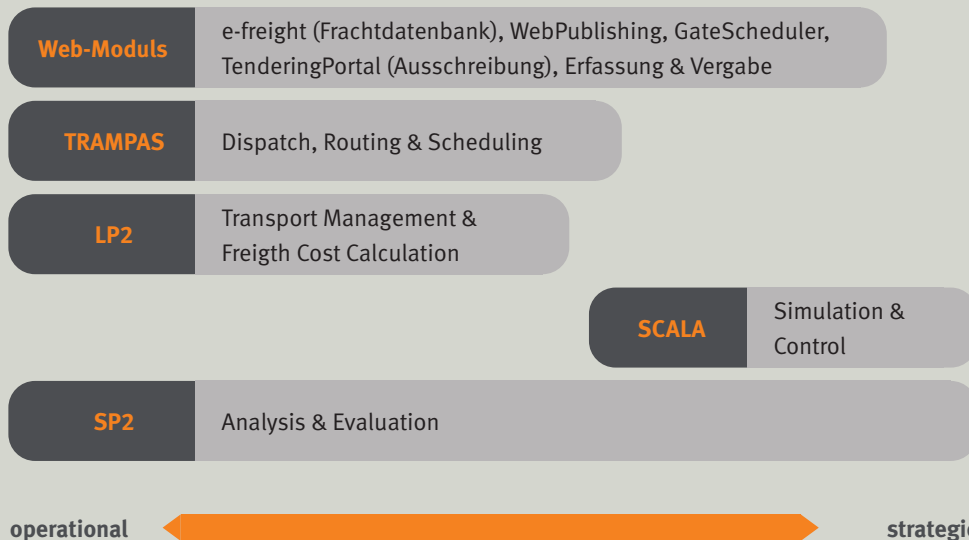

During concept development and analysis, our consultants are everywhere – on the ramps, in the warehouse, in the shipping office – in order to understand procedures, identify weak points and incorporate staff in the process.

Practical concepts and sustainable processes can only be developed and optimized with a healthy

respect for company-specific details. No company can afford to stop all processes while integrating new concepts. Our consultants know the challenges of integration during full-fledged operation. Profit from our many years of experience. We offer reliable conception and dynamic assistance in realization, guaranteeing customer satisfaction and ensuring that the load on your team stays manageable.

In short: we develop successful concepts for large and middle-sized companies – from analysis to operations research, to support in realization.

Network optimization	Location decision	Conception/optimization of sourcing and distribution scenarios	Creation and checking of outsourcing concept for warehousing and transport
Reorganization/new construction of warehouses	Process optimization in dispatch and warehousing	Freight cost optimization and benchmarking	Execution of strategic warehousing and transport tenders

SOFTWARE FOR TRANSPORT LOGISTIC

Tailored to meet your logistic challenges

We have been developing software for transport logistics since the 1970s. The result: a comprehensive collection of modular software solutions.

Are you looking for optimal support for your specific transport logistics?

Off-the-shelf software does not provide the flexibility necessary to represent your individual processes. Commissioning a customized solution for your company would be time consuming, expensive, and inflexible.

Use a future-oriented software concept. Our specialists develop software modules based on a homogeneous database structure, all of which can be flexibly combined and configured to meet each company's needs.

- Workflows, personalized views, evaluations – all components can be adjusted to fit your company's requirements and processes exactly.
- Our software grows with you: start with operational processes like routing & scheduling or freight management and expand to include your strategic functions in the areas of analysis, control and simulation – or vice versa.
- Telematics, container and loading device management, cold chain monitoring, ramp control or web-based modules for tendering processes or decentralized transport order creation: our software engineers are constantly developing new, industry-oriented software functionalities.

FUNCTIONAL AND HIGH-PERFORMANCE

IT support for every logistics task

Whether you operate with your own vehicle fleet, with service providers, or a combination of both – Staedtler-Logistics offers medium and large-sized companies configurable software designed to perform diverse operative and strategic planning tasks with high efficiency.

Routing & Scheduling: TRAMPAS

TRAMPAS is Staedtler-Logistics' routing & scheduling and planning software. You configure your framework conditions, and let TRAMPAS help you with scheduling internal and external transport capacities. High-performance, convenient and full of special functions for industries including furniture/kitchen, building materials, windows & doors, food transport, customer service.

Transport Management: LP2

LP2– the transport management system (TMS) from Staedtler-Logistics is the market-leading software for sourcing and distribution logistics – including fully automatic freight cost calculation, self-billing/pre-invoicing, freight control and cost reallocation (according to cost centers, products, etc.) for all carriers and combined transport.

Strategic Simulation: SCALA

Analyzing historical freight costs and simulating future developments are SCALA's highlights. Indispensable for companies and logistics consultants dedicated to making informed decisions on strategic tenders, logistics concepts and network and location alternatives.

Web Applications

Improve communication and lighten the load on your IT: with GateScheduler, TenderingPortal, WebPublishing, etc., you can capitalize on high performance web solutions for communication with colleagues, facilities and partners, for order creation, tenders and order assignment.

High-performance statistics, analysis and report functions are available as a supplement module in all of our software packages.

OUTSOURCING: FREIGHT CONTROL AND INVOICING

Why not have your freight costs checked and invoiced systematically?

Experienced logistics experts will tell you: freight invoices often contain errors and invoiced amounts are often too high. But you know that seamless, efficient checking requires forwarding expertise and software support. Give yourself a break: with outsourcing.

In many companies, one fifth of the freight invoices are claimable. Systematic checking by professionals often reduces freight costs by up to 10 % at first go.

Take advantage of this saving potential! We provide comprehensive freight invoice checking as a service. And what's more: we do allocation, take over claim management with your service providers and transfer all data automatically to your IT systems. Wherever possible (and desired), we introduce carriers to self-billing and take care of freight invoicing in your name.

We currently check freight charges for our clients from all carriers with a total value of more than one billion Euros per year. You too can take advantage of Staedtler-Logistics' organization, expertise and infrastructure for the outsourcing of your freight cost checking.

Your added benefits through external freight cost checking and invoicing:

- Reliable claims management – no payment of invoices containing errors
- Sustainable improvement in invoice quality from the transport service provider
- Calculable costs, scalable to volume (revenue?)
- Periodical, meaningful reports and evaluations
- Electronic transfer of payment-relevant data (DTAUS)
- Conformity with compliance rules
- Benchmarks based on our global freight database

SOFTWARE, CONSULTING AND OUTSOURCING

Our clients' success is our goal

From our beginnings as software and self-billing pioneers until today, with our simulation and visualization, outsourcing of freight checking, global freight database and state-of-the-art web interfaces: our concepts and software solutions set new standards.

Take advantage of our experience, competence and innovative power as a competitive edge for your transport logistics.

A small selection of our clients:

ABB	Himolla	Novelis	Stahl
Bauder	Johnson Controls	OBI	Stihl
Bahlsen	König + Neurath	Pfeifer & Langen	SUEZ
BAUHAUS	Krombacher	Pistor	Tarkett
Brenntag	Krones	Redbull	ThyssenKrupp
Carl Zeiss	Liebherr	REWE	Unilux
Chefs Culinar	MAKRO	Schüller	Valeo
Dehner	MEILLER	SieMatic	WERU
DORMA	Metro	Siemens	Würth
EDEKA	Miele	Sony DADC	XXXLutz
Hansgrohe	NKD	STAETTLER Mars	

Always a better way. Cutting-edge technology and consulting for optimized logistics.

At Städtler Logistik, we optimize our customers' transport logistics and help them to Reduce Costs, Improve Processes and create Sustainable Added Value and Competitive Advantages for themselves. We have been doing this for over 60 years and have always remained a pioneer with a high level of innovation. Because there is always a better way.
